Definitions:

Critical nonconformity: Any discrepancy which might harm a user or makes it impossible to use the product properly is considered to be critical. Lots with Critical discrepancies is subject to lot refusal.

Major nonconformity: Any discrepancy which makes the use of the product less efficient than expected is considered to be major. Lot with Major discrepancies can be accepted.

Minor nonconformity: Any discrepancy which does not have an influence on the performance of the product is considered to be minor. Lot with Minor discrepancies can be accepted.

Nonconforming item: Item with one or more nonconformities.

Lot: Definite amount of some product, material or service, collected together

Sample: Set of one or more items taken from a lot and intended to provide information on the lot

Non-Conformities and Corrective Action:

Critical: (AQL 0)

Determination of lot acceptability: to be decided by ICRC Quality and buyers.

Continual improvement: Improvement plan to be proposed by supplier and validated by the ICRC to eliminate the root cause of occurrence and non detection for the faced non-conformity (ies) for the upcoming purchases. Actions to be implemented by supplier within a defined time frame by default 3 months.

Penalty: 10% penalty of the value of the total PO per each critical non-conformity to be charged to the supplier.

Major: (AQL 4.0)

Determination of lot acceptability: to be decided by ICRC Quality and buyers.

Continual improvement: Improvement plan to be proposed by supplier and validated by the ICRC to eliminate the root cause of occurrence and non detection for the faced non-conformity (ies) for the upcoming purchases. Actions to be implemented by supplier within a defined time frame by default 3 months.

Penalty: 0.5% penalty of the value of the total PO per each major non-conformity to be charged to the supplier.

Minor: (AQL 6.5)

Determination of lot acceptability: to be decided by ICRC Quality and buyers.

Continual improvement: Improvement plan to be proposed by supplier and validated by the ICRC to eliminate the root cause of occurrence and non detection for the faced non-conformity (ies) for the upcoming purchases. Actions to be implemented by supplier within a defined time frame by default 3 months.

Penalty: 0.25% penalty of the value of the total PO per each minor non-conformity to be charged to the supplier.

Penalty rules for specific nonconformities:

Thermal resistance for Low Thermal blankets (AQL 4.0)
Discrepancy between requirement and the average result of nonconforming blankets:
0.15m².K/W >result≥0.14m².K/W: 1% of the value of the PO
0.14m².K/W >result0.10m².K/W: 2% of the value of the PO
0.10m².K/W >result: 5% of the value of the PO and subject to lot refusal

Thermal resistance for Medium Thermal blankets (AQL 4.0)
Discrepancy between requirement and the average result of nonconforming blankets:
0.25m².K/W >result0.23m².K/W: 1% of the value of the PO
0.23m².K/W >result0.18m².K/W: 2% of the value of the PO
0.18m².K/W >result: 5% of the value of the PO and subject to lot refusal

Thermal resistance for High Thermal blankets (AQL 4.0)
Discrepancy between requirement and the average result of nonconforming blankets:
0.40m².K/W >result0.36m².K/W: 1% of the value of the PO
0.36m².K/W >result0.29m².K/W: 2% of the value of the PO
0.29m².K/W >result: 5% of the value of the PO and subject to lot refusal

A corrective action plan must be implemented by the supplier on its processes addressing root causes of occurrence (production) and of non-detection of the nonconformity (QC). Penalty is put on hold for 3 months from the date of sharing of the inspection report with supplier, after this period if the nonconformity is not anymore found by inspection the penalty is cancelled, if the nonconformity still exists the penalty applies for the whole POs received during the 3 months.

Additional Information:
The Method of testing is drawn from ISO-28559-1 International Standards (table1: Sample size code letters, and table 2-A: Single sampling plans for normal inspection). The samples will be taken randomly by the buyer from the delivered items and then inspected. The buyer can decide either to inspect the lot at ICRC QC laboratory or to use an inspection company for analysis, or both. Transport to laboratory and analysis cost for lab testing are at expense of ICRC.

The seller can contest the results of the Quality Control done at ICRC warehouses by requesting a lab testing. In this case transport to laboratory and analysis cost for lab testing are at expense of the seller.

In case the ICRC decides to hold the penalties during the improvement plan, if the faced nonconformity(ies) persist , penalty for each non-conformity faced during the improvement plan will be applied.

#### QC Inspection at ICRC warehouses and lab testing  
(Samples of blankets must be from compressed bales)

- **Marking on the bales**: Marking expected: ICRC + BLANKET, SYNTHETIC, 1.5x2m, medium thermal resistance- 20 pieces. + PO number. No logo of the supplier allowed. Marking must remain readable and well fixed on the bale after minimum 10 handlings.
- **Bales length**: Minimum: 65cm; Maximum: 85cm.
- **Bales width**: Minimum: 40cm; Maximum: 60cm.
- **Bales height**: Minimum: 65cm; Maximum: 85cm. Height of the bales to be compressed by maximum 60% from free state to final compressed and strapped state.
- **Bales strapping**: Compressed and strapped with 5 straps (2 lengthwise, 3 crosswise).
- **Bales quality**: Bales to be wrapped in a water-tight micro perforated plastic film and covered with a polypropylene or jute woven bag. Items to not be wrapped in single use plastics.
- **Content**: Quantity per bale: 20 pieces.
- **Material**: Woven/knitted, dry raised both sides, 100% virgin polyester and/or acrylic fibers or polyester/cotton (Content ISO 1833 on dry weight)
- **Colours**: A uniform dark color that is not black (e.g. dark blue, grey, brown). No red or white. Colour should be well fixed and not run with washing.
- **Length**: Minimum: 198cm; Maximum: 206cm. To be taken on flat stabilised sample, without folds.
- **Width**: Minimum: 148.5cm; Maximum: 154.5cm. To be taken on flat stabilised sample, without folds.
- **Weight**: Minimum: 400g/m²; maximum: 700g/m². Weight determined by total weight/total surface.
- **Thickness**: 6.5 mm minimum. ISO 5084 (1kPa on 2000mm²)
- **Tensile strength**: 250N warp and weft minimum. ISO13934-1
- **Tensile strength loss after washing**: Maximum 5% warp and weft after 3 consecutive machine washing at 30°C and one flat drying. ISO13934-1 and ISO 6330
